

Investing in Africa and Developing Countries

Stimulating research, strengthening healthcare systems, and expanding our local footprint

Building local capabilities and talent

Creating **500** new jobs

Medicines for Africa and Developing Countries

Developing regional supply chains to get medicines to rural areas

Supporting Academic Chairs and collaborations at African universities

Developing home grown talent and business leaders of the future

Increasing registration and availability of medicines and vaccines

Supporting the development of new medicines specifically for African and Developing Countries patients

Aiming to equip Africa to discover, develop and produce the medicines it needs

>150

Supporting development of over 150 African scientists and clinicians

Research

Creating R&D Open Lab to increase understanding of non-communicable diseases

Manufacturing and Supply

Aiming to transfer technology, skills and knowledge to enable local manufacture

Conducting assessments on manufacturing and supply chain options

Establishing partnerships with 10 African research centres

Healthcare infrastructure

20% of profits in Least Developed Countries are reinvested to train health workers

Training more than **9,000** additional health workers in Kenya, Nigeria and Ghana with NGOs

Working with Save the Children to help save the lives of one million children

Our long-term goal

To increase access to medicines, vaccines and healthcare – and deliver sustainable growth
