

GSK Responsible Business Supplement 2015

EHS: GSK's Response to Assurance

We are pleased with Bureau Veritas' findings on GSK's established processes in managing (EHS) data. We are committed to continue improving, with the ultimate goal of providing the most accurate EHS data to the public on our website.

In 2016, we will continue to work towards improving our data accuracy with an emphasis on incorporating the recommendations provided by Bureau Veritas.

With the implementation of our new reporting system we have seen improvements in data reporting in many areas of the business. The data in the Responsible Business Supplement can be used by sites to improve their management of their EHS programmes.

In 2016, we will continue working with all sites to improve their data submission, including providing comments for the explanation of trends in a complete and timely fashion.
